(a) Separate the shared response from condition-specific changes
Response
Across-condition mean
Specific residual
1 2 3 4
g1
g2
g3
g4
g5
Illustrative values; columns = conditions, rows = genes. Repeat within each species.
Blue: negative response
White: zero
Red: positive response
(b) Test whether the condition identity matters
Matched
Donor condition 1
Human condition 1
Mismatched
Donor condition 2
Human condition 1
